Subject: RE: Agenda for April ARSG Meeting

Hi Peter --

Model calibration is complete; I'm now doing some predictive runs to determine the effect of plugging the Red & Bonita -- looking at 60-100% reductions in the load from R&B, and how that effects downstream water quality. The runs will include a 'best estimate', and additional runs to quantify the uncertainty associated w/ the best estimate. Once this set of scenarios is complete, I'll consider other remediation options which have yet to be determined.

regards,

Rob
